

## User Feedback Summary

- Users unfamiliar with mathematical distributions may struggle with the concept of "separation bars" or how objects are allocated. They might need a clearer explanation of the distribution process or a tutorial at the beginning with visuals explaining object distribution.
- If users miss information or want to adjust inputs, they want to navigate more easily to the previous steps without having to restart.
- The use of bars to represent object placement might not be intuitive. Switching to drawer images or a more visually distinct representation could make distributions clearer.
